

Printing Solution for Healthcare

Despite all the advances in digitalization and imaging technology, printing continues to be a critical function for the healthcare industry. UniPrint Infinity's™ Healthcare Printing Suite (HPS) enables speedy, error-free, and on demand secure printing from major EHS/EMR applications, with 100% uptime.

Comprising of 3 modules – Smart Route Printing, Smart Label Printing and High Availability, UniPrint Infinity™ HPS can be built into any computing environment, and accessed on desktop, laptop or mobile devices. The software-based solutions also allow users to print securely and on demand

to any printer, including specialty printers for wrist band and prescription bottle label printing. This relieves care givers from the mundane, yet necessary process of document output in the highly fast moving clinical environment, improving productivity and patient data security.

Deploying UniPrint Infinity, health organizations can optimize clinical workflow and improve quality of patient care, while complying with industry regulations (such as HIPAA in the USA).

“ With UniPrint, our medical personnel get time back in their day ”

David Baker
Vice President IT
St. Joseph Health, USA

UniPrint Infinity™ Healthcare Printing Suite – Key Features & Benefits

Error-free Printing

While VDI technology, which is increasingly adopted by hospitals, allows fast and secure access to EHS/EMR applications for the roaming hospital users, location-based printing is still problematic. UniPrint Infinity's Smart Route Printing Module ensures that printers follow the users regardless of document or printer types (e.g. patient record printer; prescription, label or other specialty printers). The net result of adopting Smart Route Printing is that users can always print documents to the right printers, thereby improving workflow, productivity and security compliance. Instead of wasting time on paper chasing or inundating help desks with printer support calls, care givers can now devote more time in providing quality patient care, and IT support can focus their time and attention on mission critical tasks.

Multiple Vendor Support

The UniPrint Infinity printing solution is certified by Citrix, Microsoft and VMware to be fully compatible with their VDI or server-centric technologies.

Low Upfront Investment & Proven ROI

Deploying the printer vendor-agnostic UniPrint Infinity software, healthcare organizations do not need to spend precious capital to standardize their printer fleet or assign dedicated IT staff to support their printing infrastructure.

Fast and Easy Printing from EHS/EMR Applications

With the Smart Route Printing Module, printing from EHS/EMR apps can now be easily configured to ensure printers follow the users. Furthermore, by printing to the UniPrint™ Virtual Print Queue (VPQ), users are no longer required to decide which printer to use while using the apps.

Secure, On-demand Printing

Tap and print on the vPad Device ensures print output can be collected only by the right person, on demand. The vPad provides one-to-multiple printers support and works with printers of any make or model. The device allows multi-factor authentication and since it is compatible with any RFID/HID smart card or key fob, no customization is required. Not only does vPad SecurePrint ensure compliance, it also provides print cost savings by minimizing print wastage.

Easy and Accurate Label Printing

UniPrint Infinity's Smart Label Printing Module enables accurate barcode printing on labels for wrist bands and prescription bottles to specialty printers by "tunneling" the native file formats.

Maximized Printing Uptime

UniPrint Infinity's High Availability Module eliminates any single point of failure in the printing infrastructure ensuring 100% printing uptime. With load balancing, printing remains fast and efficient, guaranteeing an uninterrupted workflow process.

Reduced Printing Support Calls

A single UniPrint™ Universal Print Driver eliminates all printer driver issues, reducing the demand on IT support time.
