

UNIPRINT INFINITY

Eliminate Your Virtual Desktop Infrastructure Printing Challenges

Simplifying VDI Printer Management

Virtual Desktop Infrastructure (VDI) allows organizations to centralize control over desktop deployment and minimize administration costs, while allowing users full access to their desktop applications. Managing printer drivers in virtual desktop environments with a remote workforce is a challenging task for any IT department.

UniPrint Infinity extends the benefits of VDI to printing, IT administrators need only to install one printer driver on the “master virtual desktop image,” regardless of the printer make or model, at home or at remote sites.

Eliminating Your Printing Challenges

UniPrint Infinity™ is a truly secure enterprise-wide printer management solution for any computing environment. UniPrint Infinity simplifies printer management and enables anywhere, anytime, any device, secure/follow-the-user printing across different platforms, offices and geographies, helping to create enterprise-wide efficiency and reduce printing costs.

“UniPrint provided us with an all-around printing solution and immediately lowered our cost of ownership.”

JC COLEMAN
NETWORK ADMINISTRATOR
CAROLINA CONTAINER

The UniPrint Infinity software:

- Supports thin and thick, local and remote clients connecting to VDI environments
- Supports VDI printing over PCoIP or Blast Extreme on VMware Horizon®
- Solves all printer driver incompatibility issues and enhances server stability
- Converts print data to PDF files, saving over 90% bandwidth consumption
- Allows centralized management across the network
- Enables location-based clientless printing to networked printers
- Provides end-to-end print data encryption

ABOUT UNIPRINT

- UniPrint innovates to bring the right solutions to our clients. Their mission is to develop solutions that help you go paperless and improve workflow.
- UniPrint Infinity provides a comprehensive range of enterprise print management and output solutions for all computing environments.
- UniPrint software optimizes printing functionality, simplifies printer management, improves print security and reduces bandwidth consumption.

Why UniPrint Infinity?

UniPrint Infinity printing virtualization solution offers one PDF-based, vendor-agnostic Universal Printer Driver (UPD) and one Virtual Print Queue (VPQ) built on one central management platform that can be easily installed and cleanly integrated into any VDI or Cloud printing infrastructure.

UniPrint preserves the user experience while simplifying printer and especially printer driver management in VMware Horizon VDI environments.

How it Works

UniPrint Infinity can be installed in many types of IT architectures such as Client/Server, Print Server-based, VDI, Microsoft Azure, Microsoft failover cluster and High Availability printing architectures.

Also, along with universal print driver functionality, UniPrint Infinity can also be set up for secure pull printing, mobile printing for iOS, Android and Chrome OS, print job statistics monitoring, automated print job archiving, compressed branch office printing and Smart Route printing.

UNIPRINT INFINITY

UniPrint Infinity is the print management solution for organizations that see the value of future-proofing their printing environments to provide worry-free printing to its workforce, fulfill security and compliance requirements, and save printing costs. It is especially beneficial to highly regulated industries such as cloud hosting, government, healthcare, legal, banking and finance.

UNIQUE FEATURES

- Software-based printing solution
- PDF-based Universal Printer Driver platform
- Secure Virtual Print Queue technology
- Centralized management console
- PDF conversion/compression; also for instant archiving, emailing and merging multiple PDF files before printing
- Gateway Module for client-less printing
- PrintPAL for centralized printer mapping
- Printer Profiles for centralized printer profile customization
- Secure Pull Printing
- Statistics & Archiving
- Archiving-Auditing
- End-to-end 256-bit encryption

USE CASES

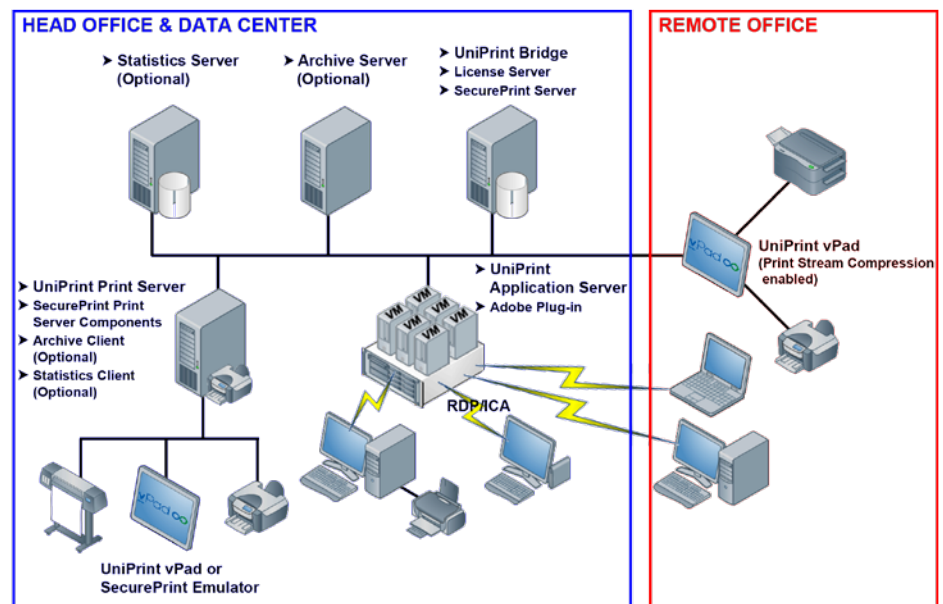

- Healthcare – [El Centro Regional Medical Center](#)
- Manufacturing – [Carolina Container](#)

In the Print Server-based architecture, workstation and/or thin-client users print through their virtual desktop sessions to network printers. The following three components are required to be installed on two servers and on the master virtual desktop images: UniPrint Bridge with the License Server, UniPrint Print Server and UniPrint Application Server.

UniPrint Client is optional and is only required for those printing to client-attached desktop printers.
